WHAT THIS IS

A ten-week system for men who want to lift heavy, run well and look like they do both.

Every week has three hard full-body gym sessions of 60–75 minutes and two runs. The work changes every two weeks, through five phases, and ends with a test week where you measure what you built.

Training is half the system. The other half is in this PDF too: your calorie number, meal plans, a food list, sleep and supplements.

> **How to read it**
>
> Every page fits your phone screen. Scroll, don't zoom. Screenshot today's workout and keep it open in the gym.

Weights are in pounds, food in grams. A kitchen scale is the cheapest piece of equipment in this program.

> **Not medical advice**
>
> Check with a doctor before starting if you have a heart condition, an injury, high blood pressure or take medication.

Start here

FIVE RULES

1 **Follow it as written**

Don’t swap days or add extra sessions because you feel good. The plan already accounts for that.

2 **Log everything**

Every weight, every rep, every run time. If it isn’t written down, you can’t beat it.

3 **Stop two reps short**

Most sets end with reps left in the tank. Grinding every set is how people get hurt and stall.

4 **Eat your number**

Calories decide if you build muscle or lose fat. Hit your number daily, not perfectly.

5 **Sleep is training**

Seven hours is the minimum. Less, and the rest of this PDF works at half power.

Start here

WHAT TO EXPECT

Honest ranges, not promises. Your results depend on where you start and how closely you follow the plan.

Week 2	Workouts feel routine. Sleep is better. You know your working weights.
Week 4	Lifts move up most sessions. Easy runs feel easier at the same pace.
Week 6	Your heaviest deadlifts so far. Clothes fit differently if you eat at a deficit.
Week 10	Most people beat their Week 1 numbers on every main lift and run the 5K noticeably faster.

Newer lifters progress fastest. If you've trained for years, expect smaller jumps, and celebrate them anyway.

Testosterone

THE HONEST VERSION

You can’t force testosterone up with a pill or a trick. You can stop the things that pull it down.

1. Sleep

Biggest lever

In a well-known study, young men sleeping five hours a night for one week had daytime testosterone 10–15% lower. Seven to nine hours is not optional.

2. Body fat

Second biggest

Higher body fat is linked to lower testosterone. Losing excess fat is one of the most reliable ways to improve it.

3. Lifting

Every week

Regular strength training supports a healthy hormonal profile and builds the muscle that keeps fat down. That’s why this program never skips the big lifts.

4. Eat enough

No crash diets

Long, aggressive calorie deficits and very low-fat diets push testosterone down. Keep fat at 0.3 g per lb or more and cut slowly.

5. Fix deficiencies

Vitamin D, zinc

Low vitamin D and low zinc are linked to low testosterone. Supplementing helps if you're actually deficient, not if you're already fine.

~~Testosterone boosters~~

Skip

Tribulus, fenugreek, D-aspartic acid and friends don't raise testosterone in any way you'd notice.

~~Heavy drinking~~

Cut it

Regular heavy drinking lowers testosterone and wrecks sleep and recovery.

> **See a doctor if**
>
> You have low sex drive, constant fatigue and lost muscle for months despite doing everything right. Ask for a morning blood test of total testosterone.

The system

THE WEEK

Mon	**Gym A**	Full body
Tue	**Run 1**	Easy, Zone 2
Wed	**Gym B**	Full body
Thu	**Rest**	Walk, stretch
Fri	**Gym C**	Full body
Sat	**Run 2**	Quality: tempo, intervals or test
Sun	**Rest**	Optional long walk, 45–60 min

You can shift the week, but keep a day between gym sessions, and don't put Run 2 the day before Gym B.

> **Lifting and running on the same day?**
>
> Lift first, run later, ideally 6+ hours apart. Easy runs right after lifting are fine. Never do hard intervals before heavy legs.

The system

TEN WEEKS

Phase 1 Weeks 1–2	**Discipline and testosterone** Build the base and the habits. Heavy compound lifts, easy running, and the sleep that makes both work.
Phase 2 Weeks 3–4	**Running and arms** Running volume goes up, leg volume comes down a notch, and arms get their own work every session.
Phase 3 Weeks 5–6	**The dark zone and deadlift** The hardest two weeks. Heavy deadlifts, strict sleep, strict food. This is where discipline gets tested.
Phase 4 Weeks 7–8	**Hybrid conditioning** Strength stays heavy, sessions get shorter rests and a conditioning finisher. Your engine catches up with your strength.
Phase 5 Weeks 9–10	**The top athlete** Week 9 peaks your strength. Week 10 tests everything you built, against the numbers from Week 1.

Section 1

TRAINING

Three hard full-body sessions a week. Six exercises, supersets and a finisher every time.

Gym A	Heavy main lifts, supersets, finisher
Gym B	Hinge and press, supersets, finisher
Gym C	Volume and conditioning

Training

HOW YOU PROGRESS

RIR means reps in reserve: how many more clean reps you could have done when you end the set. RIR 2 means you stopped with two left.

Double progression. Each exercise has a rep range, say 8–10. Start with a weight you can lift 8 times at the target RIR. Add reps each session. When every set hits 10, add weight next time: 5 lb on upper body, 10 lb on squats and deadlifts.

Fixed sets. When the plan says 4 × 5, use the same weight on every set. When all sets move well, add weight next session.

> **Tempo on every rep**
>
> Lower for 2–3 seconds, a short pause at the bottom, then lift with intent.

> **Supersets and finishers**
>
> 3a and 3b are a superset: one set of each, back to back, then rest. Every session ends with a finisher. Go hard, it's short.

> **Bad day?**
>
> Drop the weight 10% and hit the reps. A lighter session beats a skipped one.

Training

WARM-UP

Ten minutes before every session.

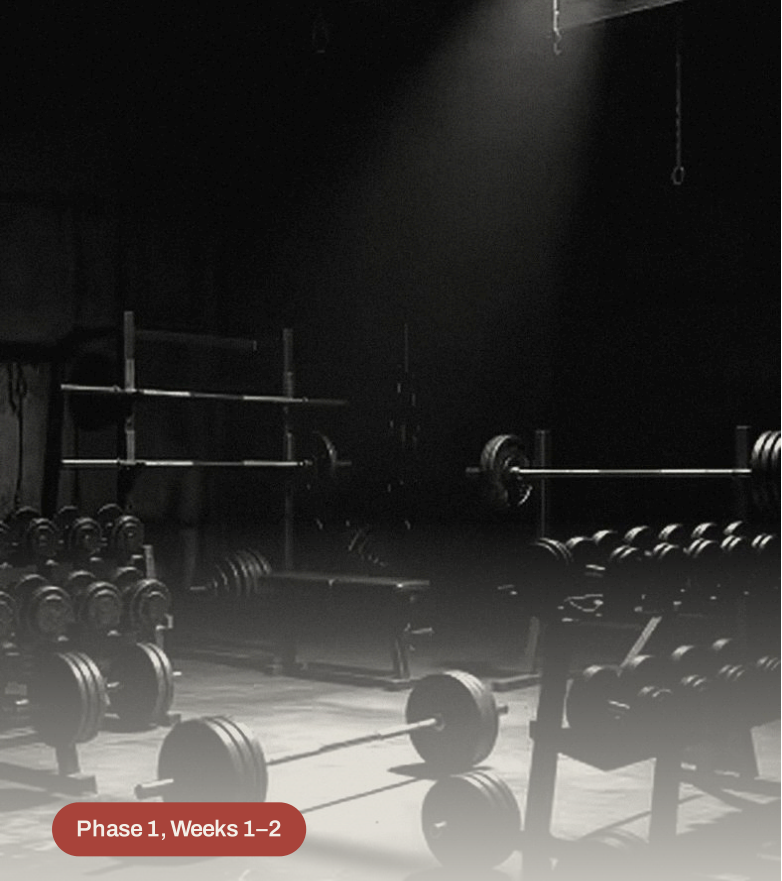

5 min	Easy bike, rower or incline walk.
8 each	Cat-cow, open books, hip airplanes.
15 reps	Band pull-aparts.
10 reps	Bodyweight squats with a pause at the bottom.

Then ramp up on the first lift

Empty bar		**× 10**
50%	of working weight	**× 5**
70%		**× 3**
85%		**× 1–2**

Cool-down, 5 minutes

Two minutes of slow breathing on your back: in for 4, out for 6. Then hamstring, hip flexor and chest stretches, 30 seconds each.

Phase 1, Weeks 1–2

DISCIPLINE AND TESTOSTERONE

Build the base and the habits. Heavy compound lifts, easy running, and the sleep that makes both work.

Lift	Learn your working weights on the big five lifts
Run	Easy Zone 2 runs and a 5K baseline test
Live	7+ hours of sleep, protein every meal
Effort	Week 1: RIR 3. Week 2: RIR 2.

GYM A

Squat and bench **70 min** with warm-up Weeks 1–2

1 Back squat **4 × 6–8**
rest 2:30

Brace before every rep. Last set: take it to RIR 1.

2 Bench press **4 × 6–8**
rest 2:30

Shoulder blades pinned, touch mid-chest, no bounce.

3a Chest-supported dumbbell row **4 × 10**
superset, no rest

Chest on the pad, pull to the hips, squeeze one second.

3b Push-ups **4 × max – 2**
rest 1:30

Rest after the pair. Body in one straight line.

4a Romanian deadlift **3 × 10**
superset, no rest

Hips back, slow on the way down, full hamstring stretch.

4b Hanging knee raise **3 × 12**
rest 1:30

Curl the pelvis up. No swinging.

Finisher, 3 rounds

40 m farmer carry, 15 kettlebell swings, 10 push-ups. Rest 60 s between rounds.

GYM B

Deadlift and press **70 min** with warm-up Weeks 1–2

1 Deadlift — 4 × 5

rest 3:00

Bar over mid-foot, lats tight, push the floor away.

2 Overhead press — 4 × 6–8

rest 2:30

Glutes tight, press in a straight line, head through.

3a Pull-up — 4 × max – 2

superset, no rest

Dead hang to chest near the bar. Scale: band or pulldown.

3b Dumbbell walking lunge — 4 × 10 / leg

rest 1:30

Long steps, back knee almost to the floor.

4a Lat pulldown — 3 × 12

superset, no rest

Pause at the chest for one second.

4b Dips — 3 × max – 2

rest 1:30

Slight lean forward. Scale: bench dips.

> **Finisher, 5 rounds**
> 10 calories on the rower, then 10 goblet squats. Rest 45 s.

GYM C

Volume **65 min** with warm-up Weeks 1–2

1 Leg press — **4 × 12**, rest 2:00

Full range, lower back stays on the pad.

2 Incline dumbbell press — **4 × 8–10**, rest 2:00

30° bench, deep stretch, press up and in.

3a Seated cable row — **4 × 12**, superset, no rest

Tall chest, elbows tight, two-second squeeze.

3b Hip thrust — **4 × 10**, rest 1:30

Ribs down, chin tucked, pause at the top.

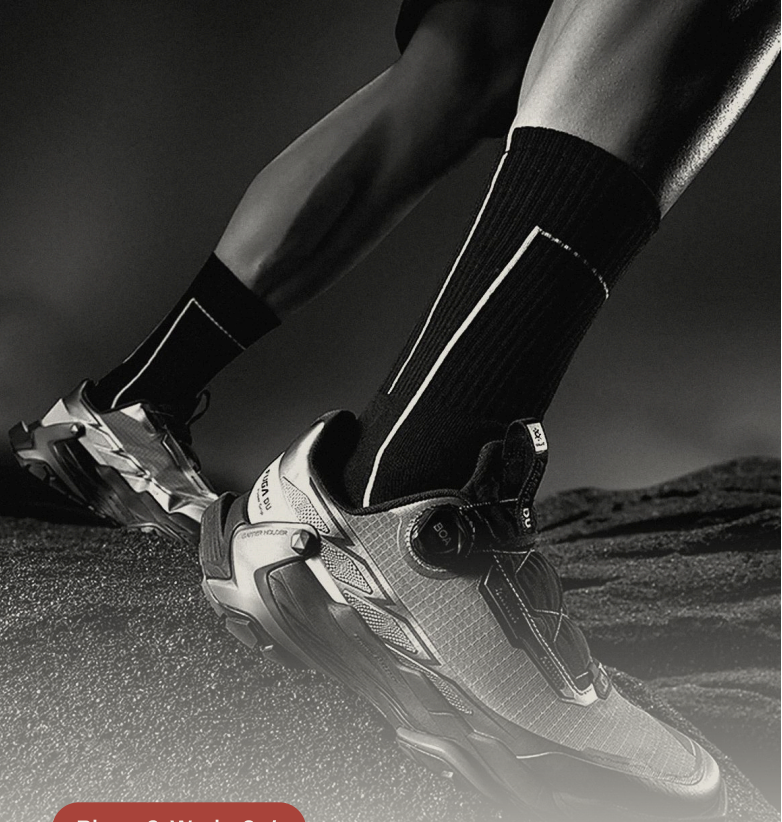

4a EZ-bar curl — **3 × 12**, superset, no rest

Elbows pinned, no hip swing.

4b Rope pushdown — **3 × 15**, rest 1:00

Split the rope at the bottom.

> **Finisher, 3 rounds**
> 30 s plank, 12 hanging knee raises, 20 calories on the bike. No rest inside the round.

Phase 2, Weeks 3–4

RUNNING AND ARMS

Running volume goes up, leg volume comes down a notch, and arms get their own work every session.

Lift	Heavier sets of 5 on the main lifts, arm finishers
Run	Tempo runs: comfortably hard, controlled
Live	Carbs around runs, protein stays at 1 g per lb
Effort	Week 3: RIR 2. Week 4: RIR 1.

GYM A

Squat, bench, arms **75 min** with warm-up Weeks 3–4

1 Back squat **5 × 5**

rest 3:00

Same weight on all sets. All five clean: add 10 lb next time.

2 Bench press **5 × 5**

rest 2:30

Pause one beat on the chest on the last set.

3a Chest-supported row **4 × 10**

superset, no rest

Full stretch at the bottom of every rep.

3b Dumbbell lateral raise **4 × 15**

rest 1:30

Light and strict. Lead with the elbow.

4a EZ-bar curl **4 × 10**

superset, no rest

Last set: drop the weight 30% and keep going to RIR 1.

4b Skull crusher **4 × 10–12**

rest 1:30

Elbows point at the ceiling, lower behind the head.

> **Finisher: 100 reps**
> 50 cable curls and 50 rope pushdowns, alternating, in as few sets as possible.

GYM B

Deadlift, pull, arms **75 min** with warm-up Weeks 3–4

1 Deadlift — 4 × 4

rest 3:00

Reset every rep. Each rep is a single.

2 Overhead press — 4 × 6

rest 2:30

Add 5 lb from Phase 1 if every rep was clean.

3a Pull-up, weighted if you can — 4 × 6–8

superset, no rest

Add weight with a belt once you pass 10 bodyweight reps.

3b Bulgarian split squat — 3 × 8 / leg

rest 1:30

Torso slightly forward, knee tracks over the toes.

4a Hammer curl — 4 × 12

superset, no rest

Neutral grip, lower for 2 seconds.

4b Overhead cable extension — 4 × 12–15

rest 1:30

Long stretch behind the head, elbows forward.

> **Finisher: EMOM 10**
> Every minute for 10 minutes. Odd minutes: 12 kettlebell swings. Even minutes: 10 burpees.

GYM C

Front squat and upper volume **70 min** with warm-up

Weeks 3–4

1 Front squat — **4 × 6**, rest 2:30

Elbows high, upright torso. Scale: goblet squat.

2 Incline dumbbell press — **4 × 10**, rest 2:00

Same weight as Phase 1, more reps.

3a Seated cable row — **4 × 12**, superset, no rest

Strict, two-second squeeze.

3b Dips — **4 × max – 2**, rest 1:30

Add weight with a belt once you pass 15.

4a Incline dumbbell curl — **3 × 12**, superset, no rest

Arms hang behind the body for a long stretch.

4b Close-grip push-ups — **3 × max**, rest 1:00

Hands under the chest, elbows tight.

> **Finisher: row intervals**
> 4 × 250 m on the rower, hard. Rest 1 minute between.

Phase 3, Weeks 5–6

THE DARK ZONE AND DEADLIFT

The hardest two weeks. Heavy deadlifts, strict sleep, strict food. This is where discipline gets tested.

Lift	Deadlift sets of 3, the heaviest weights of the program
Run	Intervals: 400 m repeats
Live	No alcohol for two weeks. Lights out at the same time daily
Effort	Week 5: RIR 2. Week 6: RIR 1 on the deadlift, RIR 2 on the rest.

GYM A

Heavy deadlift **75 min** with warm-up Weeks 5–6

1 Deadlift **1 + 4 × 3**

rest 3:00

Work up to a heavy triple. Then 4 × 3 at 90% of it.

2 Bench press **4 × 6**

rest 2:30

Keep the Phase 2 weight, own every rep.

3a Barbell row **4 × 8**

superset, no rest

Torso at 45°, pull to the lower ribs. Scale: chest-supported row.

3b Weighted back extension **4 × 12**

rest 1:30

Hold a plate to your chest. Squeeze glutes at the top.

4a Ab wheel rollout **3 × 10**

superset, no rest

Ribs down, roll only as far as your back stays flat.

4b Heavy farmer carry **3 × 40 m**

rest 1:30

Heaviest dumbbells you can hold. Grip is part of the dark zone.

> **Finisher: 5 minutes**
> Air bike, maximum calories at a steady, hard pace. Write the number down.

GYM B

Squat and pull **75 min** with warm-up Weeks 5–6

1 Back squat **4 × 6**
rest 2:30

Lighter than Phase 2. Save something for Day A.

2 Overhead press **4 × 6**
rest 2:30

Strict, no leg drive.

3a Romanian deadlift **4 × 8**
superset, no rest

Moderate weight, slow eccentric.

3b Weighted pull-up **4 × 6**
rest 1:30

Same rule: stop two reps before failure.

4a Walking lunge **3 × 12 / leg**
superset, no rest

Dumbbells at your sides, tall torso.

4b Hanging leg raise **3 × 10**
rest 1:30

Straight legs if you can, bent if you can't.

> **Finisher: sled**
> 8 × 20 m sled push, heavy. Walk back as rest. No sled: 8 × 20 s air bike sprints.

GYM C

Paused pulls and volume **70 min** with warm-up Weeks 5–6

1 Paused deadlift — **5 × 3**, rest 2:30

Pause 2 s just below the knee. 70–75% of Day A weight.

2 Incline dumbbell press — **4 × 10**, rest 2:00

Add weight if all sets hit 10.

3a Pull-up — **4 × max – 2**, superset, no rest

Strict, full range.

3b Dips — **4 × max – 2**, rest 1:30

Weighted if you pass 15.

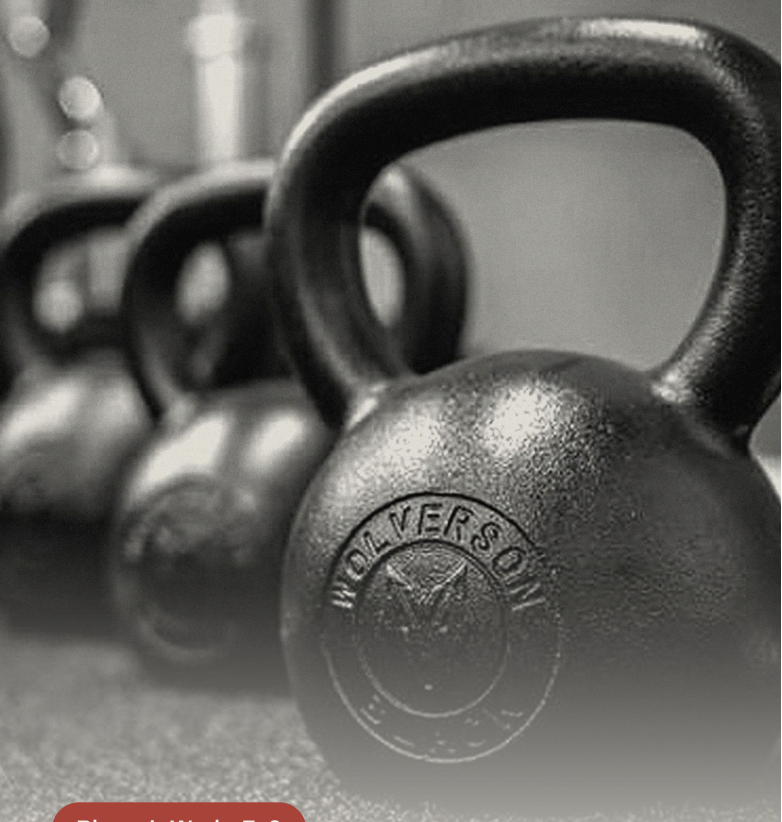

4a Hip thrust — **3 × 10**, superset, no rest

Heavy. Pause one second at the top.

4b Suitcase carry — **3 × 30 m / side**, rest 1:30

One dumbbell, don't lean. Your core does the work.

> **Finisher: 21-15-9**
> Kettlebell swings and burpees: 21 of each, then 15, then 9. For time. Beat it in Week 6.

Phase 4, Weeks 7–8

HYBRID CONDITIONING

Strength stays heavy, sessions get shorter rests and a conditioning finisher. Your engine catches up with your strength.

Lift	Sets of 5, then a 6–10 minute finisher
Run	Long tempo and hill sprints
Live	Eat at maintenance or a small deficit to lean out
Effort	Week 7: RIR 2. Week 8: RIR 1.

GYM A

Strength plus engine **75 min** with warm-up Weeks 7–8

1 Back squat — **4 × 5**, rest 2:30

Phase 2 top weight, plus 5–10 lb if it moves fast.

2 Bench press — **4 × 5**, rest 2:30

Same rule.

3a Pull-up — **4 × max – 2**, superset, no rest

Shorter rests than before.

3b Dumbbell row — **4 × 10 / arm**, rest 1:00

Knee and hand on the bench, pull in an arc to the hip.

4a Walking lunge — **3 × 12 / leg**, superset, no rest

Fast and controlled.

4b Push-ups — **3 × max**, rest 1:00

Straight body, chest to the floor.

> **Finisher: 5 rounds for time**
> 250 m row, 15 kettlebell swings, 10 burpees. Write your time down.

GYM B

Deadlift and press **75 min** with warm-up Weeks 7–8

1 Deadlift **4 × 4**
rest 3:00

About 90% of your Phase 3 triples. Fast and crisp.

2 Overhead press **4 × 5**
rest 2:30

Add 5 lb if Phase 3 went well.

3a Chest-supported row **4 × 10**
superset, no rest

Squeeze, don't yank.

3b Goblet squat **4 × 12**
rest 1:00

Upright torso, full depth.

4a Farmer carry **4 × 40 m**
superset, no rest

Heavy.

4b Hanging knee raise **4 × 15**
rest 1:00

No swinging.

> **Finisher: sled and run**
> 8 × 20 m heavy sled push, then run 400 m right after the last one.

GYM C

Volume and engine **70 min** with warm-up Weeks 7–8

1 Front squat — **4 × 6**, rest 2:30

Heavier than Phase 2.

2 Incline dumbbell press — **4 × 8**, rest 2:00

Heavier than Phase 3.

3a Seated cable row — **4 × 10**, superset, no rest

Strict.

3b Dips — **4 × max – 2**, rest 1:00

Weighted if you can.

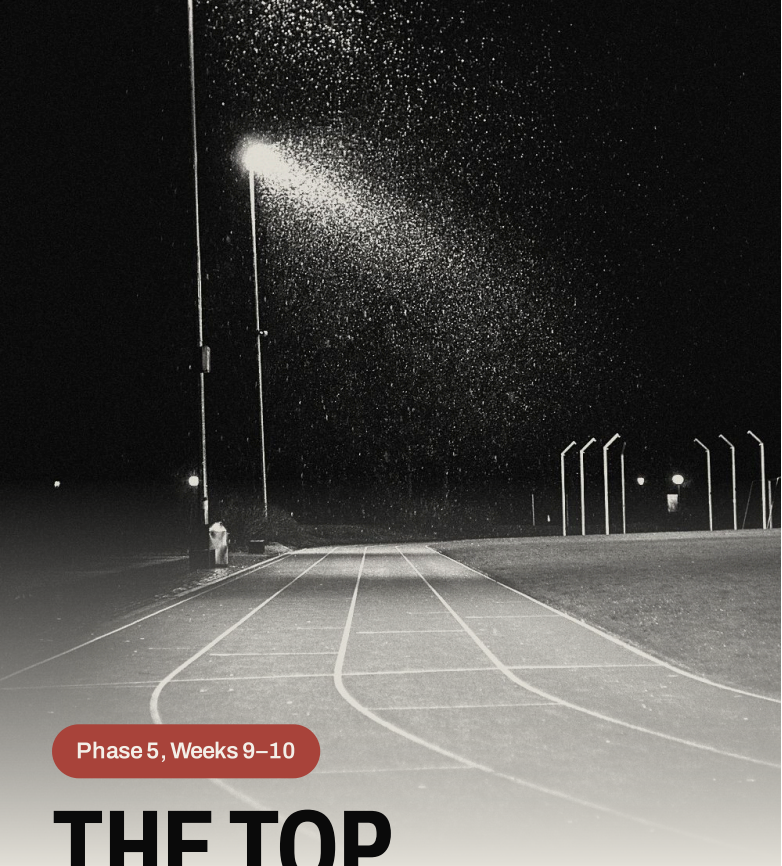

4a Hip thrust — **3 × 10**, superset, no rest

Heavy, pause at the top.

4b Ab wheel rollout — **3 × 10**, rest 1:00

Ribs down.

> **Finisher: EMOM 16**
> Minute 1: 15 calories bike. Minute 2: 12 kettlebell swings. Minute 3: 10 push-ups. Minute 4: rest. Four rounds.

Phase 5, Weeks 9–10

THE TOP ATHLETE

Week 9 peaks your strength. Week 10 tests everything you built, against the numbers from Week 1.

Lift	Heavy triples in Week 9, max tests in Week 10
Run	800 m repeats, then the 5K retest
Live	Sleep and food at their best. You're testing, not training
Effort	Week 9: RIR 1 on top sets. Week 10: test week, see the test page.

GYM A

Peak: squat and bench **70 min** with warm-up Weeks 9–10

1 Back squat **5 × 3**
rest 3:00

Heaviest triples of the program. Every rep clean.

2 Bench press **5 × 3**
rest 3:00

Same.

3a Chest-supported row **4 × 8**
superset, no rest

Heavy.

3b Weighted dips **4 × 6**
rest 1:30

Belt and a plate.

4a Plank **3 × 60 s**
superset, no rest

Brace as hard as you can.

4b Farmer carry **3 × 40 m**
rest 1:30

Heaviest of the program.

> **Finisher: speed**
> 6 × 15 s air bike all-out, 45 s easy.

GYM B

Peak: deadlift and press **70 min** with warm-up Weeks 9–10

1 Deadlift **4 × 2–3**
rest 3:00

About 95% of your Phase 3 triples. Stop if bar speed drops.

2 Overhead press **5 × 3**
rest 2:30

Heaviest triples.

3a Weighted pull-up **4 × 4–6**
superset, no rest

Heaviest of the program.

3b Bulgarian split squat **3 × 6 / leg**
rest 1:30

Heavy dumbbells.

4a Hammer curl **3 × 10**
superset, no rest

Strict.

4b Rope pushdown **3 × 12**
rest 1:00

Strict.

> **Finisher, 3 rounds**
> 500 m row, 20 walking lunges. Rest 90 s.

GYM C

Peak: power and speed **55 min** with warm-up Weeks 9–10

1 Box jump **4 × 5**
rest 1:30

Explode up, step down. Quality over height.

2 Goblet squat **3 × 10**
rest 1:30

Fast up, controlled down.

3a Incline dumbbell press **3 × 10**
superset, no rest

Moderate.

3b Seated cable row **3 × 12**
rest 1:00

Moderate.

4a Hanging leg raise **3 × 12**
superset, no rest

Strict.

4b Dumbbell lateral raise **3 × 15**
rest 1:00

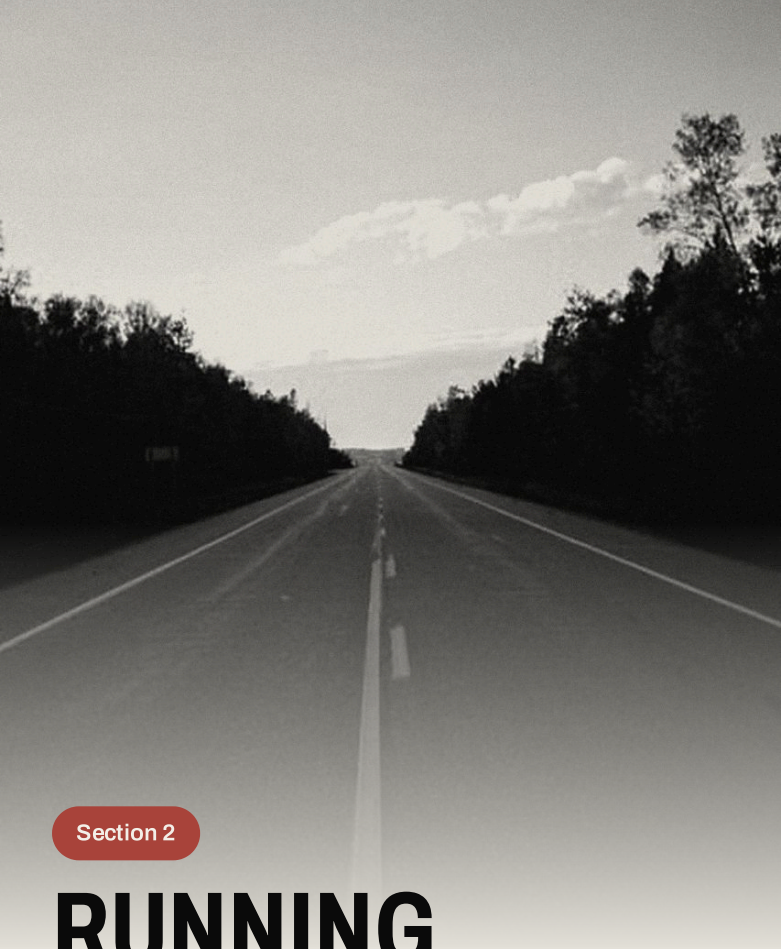

Light, strict.

TEST WEEK

You built it. Now measure it. Warm up fully and compare with Week 1.

Mon	**Squat and bench.** Work up to a heavy set of 3–5 on each. Stop when form slows down.
Tue	Easy run, 30 minutes.
Wed	**Deadlift and pull-ups.** Heavy set of 3–5 on the deadlift, then one set of max pull-ups.
Fri	Light full body: Phase 5 Gym C at RIR 3.
Sat	**5K retest.** Same route and time of day as Week 1.

> **Estimated max**
>
> Weight × (1 + reps ÷ 30). A 225 lb squat for 5 reps estimates a 263 lb one-rep max. Write it in your log.

Section 2

RUNNING REGIMEN

Two runs a week. One easy, one hard. That's all a hybrid athlete needs to build a real engine.

Run 1	Easy, Zone 2, every week
Run 2	Tempo, intervals, hills or a test
Tests	5K in Week 1 and Week 10

Running

YOUR ZONES

Easy, Zone 2

Run 1

You can talk in full sentences. Roughly 60–70% of your max heart rate, which is about 220 minus your age. At 30: 114–133 bpm. Slower than you think.

Tempo

Comfortably hard

You can say a few words, not a sentence. About the pace you could hold for an hour, racing.

Intervals and hills

8–9 out of 10

No talking. Each repeat at the same pace. If the last one is much slower, the first was too fast.

> **Form, in three cues**
>
> Run tall. Quick, light steps under your hips. Relax your shoulders and hands.

Running shoes from a running store, not lifting shoes. Treadmill at 1% incline works for every session.

Running

TEN-WEEK PLAN

Wk	Run 1	Run 2
1	Easy 25 min	5K baseline test. Run, or run-walk, at your best steady effort. Write the time down.
2	Easy 30 min	Intervals: 6 × 1 min hard, 2 min walk or jog.
3	Easy 30 min	Tempo: 3 × 5 min comfortably hard, 2 min easy between.
4	Easy 35 min	Tempo: 3 × 6 min comfortably hard, 2 min easy between.
5	Easy 35 min	Intervals: 6 × 400 m hard, 90 s easy between.
6	Easy 40 min	Intervals: 8 × 400 m hard, 90 s easy between.
7	Easy 40 min	Tempo: 20 min continuous, comfortably hard.
8	Easy 45 min	Hills: 8 × 30 s uphill hard, walk down as rest.
9	Easy 40 min	Intervals: 5 × 800 m hard, 2 min easy between.
10	Easy 30 min	5K retest. Same route, same time of day as Week 1.

Warm up 8–10 minutes easy before every Run 2, and cool down 5 minutes.

Running

NEW TO RUNNING?

Use run-walk. It builds the same engine with less pounding.

Weeks 1–2	1 min run, 1 min walk. Repeat for the session time.
Weeks 3–4	2 min run, 1 min walk.
Weeks 5–6	4 min run, 1 min walk.
Weeks 7+	Continuous easy running. Walk breaks whenever you need them.

For Run 2, keep the structure but use fast walking uphill or the bike instead of hard running until Week 5.

> **Pain rule**
>
> Sharp pain, or pain that changes how you run: stop and walk home. Dull muscle soreness that fades as you warm up is fine.

Section 3

NUTRITION MATRIX

Calories decide the direction. Protein decides what the weight is made of. Consistency decides everything.

Calories	Find your number in five minutes
Plans	Four meal plans, 2,200 to 3,800
Food	What to buy, what to swap

Calories

FIND YOUR NUMBER

1 Convert

Weight in kg = pounds ÷ 2.2. Height in cm = inches × 2.54.

2 Base burn (BMR)

Men: 10 × kg + 6.25 × cm − 5 × age + 5

Mifflin-St Jeor, the most accurate simple formula.

3 Maintenance

BMR × 1.55 with this program and a desk job. × 1.7 with a job on your feet.

4 Set the goal

Build: maintenance + 300. Lean out: maintenance − 500. Recomp: maintenance.

Example	30 y, 5′10″, 180 lb	
BMR	818 + 1,113 − 150 + 5	**1,786**
Maintenance	1,786 × 1.55	**2,768**
Build	2,768 + 300	**≈ 3,070**

Calories

QUICK TABLE

No time for the formula? Bodyweight × 15 is close enough to start. Adjust after two weeks.

Weight, lb	Lean out	Maintain	Build	Protein
130 59 kg	1,450	**1,950**	2,250	130 g
140 64 kg	1,600	**2,100**	2,400	140 g
150 68 kg	1,750	**2,250**	2,550	150 g
160 73 kg	1,900	**2,400**	2,700	160 g
170 77 kg	2,050	**2,550**	2,850	170 g
180 82 kg	2,200	**2,700**	3,000	180 g
190 86 kg	2,350	**2,850**	3,150	190 g
200 91 kg	2,500	**3,000**	3,300	200 g
210 95 kg	2,650	**3,150**	3,450	210 g
220 100 kg	2,800	**3,300**	3,600	220 g
230 105 kg	2,950	**3,450**	3,750	230 g

Calories

SPLIT IT UP

Protein — 1 g per lb

Of bodyweight, daily. Over 230 lb, use your goal weight. 4 calories per gram.

Fat — 0.35 g per lb

Never under 0.3 g per lb, even when leaning out. It protects your hormones. 9 calories per gram.

Carbs — The rest

Fuel for lifting and running. What's left of your calories, divided by 4.

Protein	180 g × 4	**720**
Fat	63 g × 9	**567**
Carbs	(3,070 – 1,287) ÷ 4	**446 g**

Adjust every two weeks

Weigh yourself every morning, average each week. Building and not moving for two weeks: add 150–200 calories. Leaning out and stuck: remove 150–200, or add 2,000 daily steps. Change one thing at a time.

Meal plans

HOW TO USE THEM

Pick the plan closest to your number. Same meals, different portions.

2,200	Leaning out at 150–170 lb
2,700	Leaning out at 190+ lb, or building at 150–160 lb
3,200	Building at 170–190 lb
3,800	Building at 200+ lb, or a physical job

> **Around training**
>
> Meal 3 goes 1–2 hours before lifting or running hard, or right after. On easy-run and rest days, eat the same plan.

Weigh rice and chicken cooked, beef and potatoes raw, oats dry. Spices, salt, hot sauce and zero-calorie drinks are free.

Meal plan

Meal plan

MORE MEALS

Built for the 2,700 plan. Swap one in for the meal it replaces. Scale portions up or down for your plan.

Salmon and potatoes

Dinner swap for Meal 4. salmon, raw 170 g, potatoes, raw 300 g, broccoli or green veg 100 g, olive oil 7 g, 1½ tsp.

681 kcal, 42 P, 58 C, 30 F

Beef and rice bowl

Lunch swap for Meal 2. lean beef 93/7, raw 180 g, white rice, cooked 200 g, broccoli or green veg 150 g, whole eggs 1 large.

658 kcal, 53 P, 67 C, 19 F

Eggs, toast and avocado

Breakfast swap for Meal 1. whole eggs 3 large, egg whites 100 g, sourdough bread 70 g, avocado 70 g, blueberries 100 g.

626 kcal, 39 P, 59 C, 27 F

Meal plan

SWAPS

Swap anything for another item on the same line. The numbers stay almost the same.

Lean protein

200 g cooked chicken *or* 200 g cooked turkey *or* 260 g raw cod *or* 2 cans tuna

Red meat and fish

200 g raw beef 93/7 *or* 160 g raw salmon *or* 220 g raw pork tenderloin

Carbs

200 g cooked rice *or* 340 g raw potatoes *or* 70 g dry oats *or* 165 g cooked pasta

Fats

10 g olive oil *or* 55 g avocado *or* 15 g peanut butter *or* 15 g almonds

Dairy

300 g Greek yogurt *or* 250 g cottage cheese *or* 1¼ scoops whey

Food list

WHAT TO BUY

Chicken breast
31 g protein / 100 g

Salmon
20 g protein, omega-3

Lean beef 93/7
21 g protein, zinc, iron

Eggs
6 g protein each

Greek yogurt
10 g protein / 100 g

Rolled oats
Slow carbs, fiber

White rice
Easy carbs around training

Potatoes
Most filling carb there is

Avocado
Healthy fats, potassium

Berries
Fiber, low calories

Broccoli
Two fists of greens a day

Olive oil
Your main cooking fat

Food list

THE REST

Rarely

- Soda, juice and sweet coffee drinks
- Fried food and pastries
- Protein bars that are candy in disguise

Eating out

Order a protein, a carb and a vegetable. Ask for sauce on the side. Estimate generously and move on.

Alcohol

Zero during Phase 3. Otherwise, two drinks at most, and never the night before Gym B or Run 2.

Water

Half your bodyweight in ounces daily, plus 16–24 oz per hour of training. At 180 lb: about 90 oz, 2.7 liters. Add a pinch of salt on long or hot runs.

Section 4

SLEEP

You don't grow in the gym. You break down in the gym, and grow in bed.

7–9 h	Of sleep, every night
Same time	Wake-up within 30 minutes, every day
Cool, dark	65–68°F, 18–20°C, no light

Sleep

THE EVENING

Morning	Daylight within 30 minutes of waking, 5–10 minutes outside. It sets your body clock for tonight.
8–10 h before bed	Last caffeine. Bed at 11 pm means no coffee after 2 pm.
3 h before	Last big meal. No hard runs.
1 h before	Dim the lights, phone in another room or on night mode, hot shower.
Lights out	Same time as yesterday. Cool, dark, quiet.

> **Bad night?**
>
> Get up at your usual time anyway. A 20-minute nap before 3 pm is fine. Train, but drop the weights 10%.

Section 5

SUPPLEMENTS

No shortcut comes in a jar. A few things are worth your money. Most are not.

Worth it	Creatine, protein, caffeine, omega-3, D3, psyllium
Minerals	Magnesium, zinc, iron: only if low
Leave it	BCAAs, boosters, fat burners

Supplements

WORTH IT

Creatine monohydrate

3–5 g daily

The most researched sports supplement. More strength, more reps, more muscle over time. Safe for healthy adults.

Every day, any time, no loading. 1–2 lb of water weight in the first weeks is normal.

Protein powder

25–40 g a serving

Just convenient protein to hit your daily target.

Whey after training or when short on protein. Lactose issues: isolate or pea and rice blend.

Omega-3 fish oil

1–2 g EPA + DHA

Heart health, lower triglycerides, may ease joint soreness under heavy training.

With a meal. Count EPA plus DHA on the label. Skip if you eat fatty fish twice a week.

Vitamin D3

1,000–2,000 IU

Bones, immunity, muscle function. Low levels are common if you train indoors, and linked to lower testosterone.

With your fattiest meal. Test your blood level if you can. Don’t exceed 4,000 IU without a doctor.

Psyllium husk

5–10 g daily

Fiber. Regular digestion, fuller on a cut, lower LDL cholesterol.

Start at 3–5 g in a big glass of water. Two hours away from any medication.

Caffeine

100–300 mg

Stronger, longer sessions. One of the few pre-workout ingredients with solid proof.

30–60 minutes before training. Under 400 mg a day. None 8–10 hours before bed.

Supplements

MINERALS

Magnesium glycinate

200–350 mg

Muscle and nerve function. Some sleep better on it, especially on a diet low in greens and nuts.

In the evening. Glycinate is easy on the stomach.

Zinc

15–30 mg, if low

Linked to testosterone only when you're deficient. Red meat, oysters and eggs cover most people. Don't go above 40 mg a day.

Iron and B12

Test first

Fix fatigue and poor endurance when you're actually low. Too much iron is harmful. B12 is essential if you eat no animal products.

Electrolytes

300–600 mg sodium / h

For long runs, hot gyms and heavy sweaters. A pinch of salt in water does the job.

Supplements

WORTH IT IF

Beta-alanine

3.2–6.4 g daily

Helps hard efforts of 1–4 minutes: intervals, finishers. Split into 2–3 doses, takes 4 weeks to work. Tingling is harmless.

Citrulline malate

6–8 g

Maybe a few more reps and a better pump. Nice, never necessary. 45–60 minutes before training.

Melatonin

0.5–1 mg

For jet lag or a shifted schedule, not a nightly sleeping pill. Most US products overdose it.

Multivitamin

1 a day

Cheap insurance on a hard cut or a narrow diet. Doesn't replace food.

Supplements

LEAVE IT

~~BCAAs and EAAs~~ Skip

Pointless if you eat your protein. You're paying for flavored water.

~~Testosterone boosters~~ Skip

Don't raise testosterone in healthy men in any way you'd notice.

~~Fat burners~~ Skip

Mostly caffeine at ten times the price. Some strain your heart or liver.

~~Glutamine~~ Skip

No muscle or strength benefit in healthy lifters.

~~Mass gainers~~ Skip

Sugar and powder. Blend 80 g oats, a banana, a scoop of whey and 400 ml whole milk instead: about 750 calories.

~~"Proprietary blends"~~ Skip

They hide the doses. Put it back.

Supplements

DAILY STACK

Breakfast	Creatine 5 g, omega-3, vitamin D3 in winter.
Mid-morning	Psyllium 5 g in a big glass of water.
Pre-training	Coffee, 30–60 minutes out.
Post-training	Whey, if short on protein.
Evening	Magnesium glycinate.

> **Buy tested**
>
> Supplements aren't approved before they're sold. Look for an NSF Certified for Sport or Informed Sport seal.

Talk to a doctor before starting any supplement if you take medication or have a health condition.

Discipline

MISSED A DAY?

Everyone does. What matters is the next 24 hours.

Missed a gym day	Do it tomorrow and push the week by a day. Never do two gym sessions in one day to catch up.
Missed a week	Repeat the last week you completed. Don’t jump ahead.
Ate badly	Next meal is a normal meal. No fasting, no punishment cardio.
Sick	Rest. Come back at RIR 3 for one week.

> **The only rule**
>
> Never miss twice. One missed day is life. Two is a new habit.

Tracking

WEEKLY CHECK-IN

Every Sunday. Screenshot this page and fill it in, or copy it into your notes.

- [ ] Hit all 3 gym sessions
- [ ] Hit both runs
- [ ] Hit my calories 5+ days
- [ ] Protein at target 5+ days
- [ ] Slept 7+ hours 5+ nights
- [ ] Took creatine every day

	This week	Last week
Bodyweight avg		
Waist at navel		
Energy, 1–5

Tracking

WEEK 1 VS 10

Your top numbers. Fill in Week 1 now, Week 10 at the test.

	Week 1	Week 5	Week 10
Back squat			
Bench press			
Deadlift			
Overhead press			
Pull-ups, reps			
5K time			
Bodyweight			

What's next

RUN IT AGAIN

Ten weeks done. You're not the same athlete who started.

Take one easy week: lift at RIR 3, run easy only. Then start again at Phase 1 with your new numbers. Every lap of the system starts heavier and finishes faster.

Or take the next step and train with me directly.
